

# ADSL

These instructions explain how to connect your Leaptel router to ADSL.

Please contact support if you have any questions, our contact details are on the back page.

1. Locate a telephone port which has been enabled for your ADSL service, the port looks similar to one of the following:

2. Unpack your supplied Netcomm Router and connect the power near the socket.

3. Run the supplied telephone from the grey DSL port on the Netcomm Router to line socket on wall.

If you also use the home phone you will need to connect the router up through a splitter.

4. Turn your modem on by pressing the On/Off button located on the side of the modem.

5. On the front of the modem, after a few minutes (it can take upto 3 minutes), you should see DSL light go green and steady (not flashing).

6. After 60 seconds the internet light should also come on.

7. You are now online and able to connect to the internet.

- a) If you wish to connect via wireless, look on the bottom of your modem for your wireless details and use the credentials supplied to connect your computer up. Your wireless details are also provided on a card in the box with your modem. For further information on how to do this please consult your devices documentation or the Leaptel website
- b) If you wish to connect via ethernet cable, you need to plug your cables into the yellow ethernet ports between your computer and the modem. Some homes have had ethernet cable run which can be used for this purpose. Please talk to your electrician or builder for further information.
