

# Opticomm

These instructions explain how to connect your Leaptel router to the Opticomm Network. Please contact support if you have any questions, our contact details are on the back page.

1. Locate the Opticomm ONT. The ONT is installed by Opticomm and is normally located in the garage. It looks similar to one of the following:

NEC

Huawei

Dasan

Alloptic

Orient

Zyxel

2. Unpack your supplied Netcomm Router and connect the power near the Opticomm ONT and turn it on.
3. Run the supplied yellow network cable from the blue WAN port on the Netcomm Router to Lan 1 on your ONT.

6. After 60 seconds the internet light should also come on.

4. Turn your modem on by pressing the On/Off button located on the side of your modem.

7. You are now online and able to connect to the internet.

5. You should now see the WAN light located on the front of the router is now green.

- a) If you wish to connect via wireless, look on the bottom of your modem for your wireless details and use the credentials supplied to connect your computer up. Your wireless details are also provided on a card in the box with your modem. For further information on how to do this please consult your devices documentation or the Leaptel website
- b) If you wish to connect via ethernet cable, you need to plug your cables into the yellow ethernet ports between your computer and the modem. Some homes have had ethernet cable run which can be used for this purpose. Please talk to your electrician or builder for further information.
