Online gaming	✓	✓	✓	✓	✓	✓	✓	✓	✓
Download and upload large files	✗	✓	✓	✓	✓	✓	✓	✓	✓

1. Speeds you experience may be lower and will vary through out the day, particularly during the evening period (7pm-11pm). Actual speeds may be impacted by local area congestion, your usage and by other factors as outlined below.

Factors that can impact the performance of your connection at the premises

- Your own Wi-Fi capacity and coverage area
- Location of your router
- Internal wiring
- Network capacity and network traffic
- The website/content you're accessing and its capacity and capability
- Wired connections are more reliable than Wi-Fi for connectivity

Service during power outages

Please note that during a power outage your Opticomm service will not work. Your internet connection works through your router which requires power to operate. Further, Opticomm infrastructure in your area may also lose power which will affect your connection. If you have a phone service that runs over your Opticomm service, this will also not work during a power outage and you will not be able to make emergency '000' calls. You will need to use a mobile phone in these circumstances to contact emergency services.

Medical and security alarms

Leaptel does not guarantee that your medical or security alarm will work on our network. If you require priority assistance or have life critical medical equipment that requires an internet connection, we recommend that you use a provider that supports these services. You must confirm that your medical or security alarm is compatible with Opticomm service before switching your service to Leaptel.
